

THE INVISIBLES PROJECT

INTERNETBAR.ORG INSTITUTE

THE PROBLEM THE INVISIBLES PROJECT SOLVES

The Invisibles project directly addresses lack of access to opportunity, a major component of access to justice, caused by lack of identification. Potential employers, schools, healthcare providers, Law enforcement requires ID. Opportunities exist for stateless refugees and others to acquire education, receive healthcare, and receive protection under the law, but those opportunities can be accessed only by those with Identity. This barrier - lack of identity - is the basic problem targeted by the Invisibles project.

FIELDS OF MEDICINE, EDUCATION AND MUSIC FOR HUMANITARIAN RIGHTS

Internetbar.org Institute is the hub for the first SSI digital identity projects in the fields of medicine and music for humanitarian rights, thanks to:

- Its large network of tech, legal, humanitarian professionals and organizations
- 8 years of experience of working with marginalized communities, see peacetones.org
- Has recently established the JusticeHub Innovation Lab

IMPACT THE INVISIBLES PROJECT BRINGS

ISSUING DIGITAL IDENTITIES

Digital identity consists of various types of credentials (medical, educational, legal, etc.) held on smart phone or personal storage/secure vault in the cloud. These credentials are exchanged using verifiable claims issued on Blockchain/Distributed Ledger Technology based on standards being developed by Sovrin.org for a portable and interoperable identity(Self-sovereign identity).

GLOBAL GOVERNANCE FRAMEWORK

The standards will be used to build a trans-national informal justice system. This will be a new ecosystem consisting of harmonized set of rules and procedures that govern issuance and usage of digital identities within 'Trusted Online Communities'. These standards will allow the establishment of the legal framework of the verifiable identities for the first target Invisibles population.

OUR ACTION PLAN

1. ESTABLISH IDENTITY FOR DOCTORS:

First, identity will be issued to Healthcare workers in Bangladesh healthcare projects and medical colleges using Truu and Sovrin DLT. We will set identity best practices for standards in poor settings and refugee camps.

2. ESTABLISH IDENTITY FOR REFUGEES:

Once local doctors and paramedics trust the value of the new online credential they will direct the local population and refugee communities to Identity creation, as agents of change. A Digital Penpal, a trained IBO member will work closely with a partner refugee to establish his/her identification.

3. ADD OTHER TYPES OF CREDENTIALS

Various types of credentials will be added to the ID wallets such as: 1) educational credentials will be issued to children participating in JAAGO's educational program by ODEM, on-demand educational marketplace; 2) ownership of music (digital assets) created by the IBO's PeaceTones label musicians will be written into the wallet enabling to receive fair payment for their work.
